Introduction

About the ePad electronic signature product family

ePadLink electronic signature pads (ePads) are pen input devices that capture hand-written signatures for use in PC applications. Designed to mimic the natural feel of signing on paper, the ePads can be used on the desktop, yet are small and light enough to take on the road. Forms requiring signature approvals can now be completed and stored electronically. For secure transactions, the details of a signature can be analyzed to confirm the identity of a signer. With the ePad product family, it’s easy to add signatures to electronic documents, anytime, anywhere!

The standard ePad

The standard ePad is designed for basic electronic signature capture. It is light-weight and self-powered via a USB port. This is ePadLink’s standard model and has been implemented in hundreds of applications and environments where electronic signature is necessary.

The ePad II

The second generation of electronic signature technology from ePadLink, ePad II provides increased security and performance for mission critical applications. Integrating ePadLink’s semiconductive technology with advanced features such as user definable report rates (up to 400 RPS), the ePad II provides higher signature definition and biometric repeatability. Optimized for use with a passive stylus, the ePad II is compatible with the IntegriSign Signature Software Suite and proprietary applications in Windows XP, Vista,

**The ePad-ink**
The ePad-ink allows electronic signature capture with interactive visual feedback via LCD. It is based on an ITO resistive touchpad technology. The 3” x 2.2”, 300 d.p.i. screen is stylish and allows for powerful integration flexibility in any environment with its bi-directional communications capability. The ePad-ink has a USB interface.

**The ePad-vision**
This latest addition to ePadLink’s ePad® Family not only captures secure, legally-binding esignatures, its large, full-color LCD screen enables you to display unique visual images and text that attract attention and help your customer-facing representatives cross-sell products and services. Dynamic functionality lets you display targeted marketing messages and colorful images, personalize your backgrounds, conduct customer surveys, have signers scroll through compliance text, and more. Selectable onscreen check boxes and response buttons enable you to obtain important customer information, and make it easy for customers to opt-in to special offers.

Troubleshooting

Care and Maintenance

ePadLink ePads are durable and will last for many years. Proper care and maintenance, however, will better guarantee the reliability and performance of your ePad over its lifetime.

The only periodic maintenance your ePad requires is to keep it clean. A dirty pad surface may interfere with moving your stylus smoothly across the surface.

Maintain your signature pad properly by following these guidelines:

1. Never leave the pad exposed to the sun for long periods of time. If you keep the pad locked in a car on a hot day, leave a window cracked to help with ventilation and keep the pad in a carrying case or shaded area of the vehicle.

2. To clean the pad, follow these guidelines:
   a. Use any mild liquid household cleaner or rubbing alcohol.
   b. Apply a small amount of cleaner to a soft, non-abrasive cloth and wipe the pad or sensor.
   c. Be sure to wipe all cleaner residue from the device.
   d. Allow the alcohol to evaporate normally.

CAUTION:

1. Do not pour cleaner or alcohol directly onto the device. Apply the cleaner to a soft cloth first.
2. Do not use De-Natured Alcohol. This will damage the plastic case.
3. Do not allow liquid to drip inside the unit.
4. Do not expose the device to extreme cold or heat.
5. Do not put objects pressing against the signature pad area when storing the device.
6. Do not use a ballpoint pen or other sharp objects. Use only the supplied stylus.

PART II SOFTWARE FOR EPAD SIGNATURE PADS

Introduction

There are four types of software used with our ePadLink electronic signature pads:

- Universal Installer
- pDoc Signer
- Integrisign Desktop
- eSign Emcee

Further details and download information may be found on our website www.epadsupport.com.

Universal Installer

This software installs the “drivers” that run on your PC or server to provide the communication between your application programs and your ePadLink electronic signature pad. It is called the Universal Installer because it can install drivers for all the different models of ePadLink electronic signature pads. Unless you have a specially configured installer, you must run the Universal installer on each computer that has an ePadLink signature pad connected to it.

pDoc Signer

pDoc Signer is a Windows desktop application program that provides the capability to capture high resolution digital
signatures from an attached ePad electronic signature pad and securely embed the signatures, including associated biometric information, into digital signature fields in your PDF documents. In addition, pDoc Signer provides the capability to create new signature fields, size and shape them to the desired dimensions, and place them anywhere in a PDF document, without having to use expensive PDF document applications.

### IntegriSign Desktop

IntegriSign Desktop provides the plug-ins that enable signature capture in popular desktop applications: Microsoft Word and Excel, and Adobe Acrobat and Reader. After installing IntegriSign Desktop on your computer, you will be able to place signature fields into Word, Excel, and PDF documents and sign them, all from within the application program.

### eSign Emcee

eSign Emcee is a powerful server-based software system that allows software developers, systems integrators, and enterprise IT departments to easily incorporate electronic signatures into existing document-processing work flows. As a web-based browser solution, eSign Emcee facilitates electronic signing of document ceremonies (collections of documents) by different people at different times in different locations using a variety of signature collection methods: electronic signature pads, mobile devices (iPads and iPhones), and click-to-sign with a mouse.
